

What do I do when I graduate? It's never too early to start preparing...

Dr Aindrias Ryan, December 2021

Embedding employability attributes in graduates is an important aspect of the Medical Biology undergraduate degree at the University of Bolton.

In the first semester, Charlotte Castelli, a dedicated careers advisor at the University of Bolton presented several seminars including 'Graduate routes and a degree is not enough' and 'Job preparation: CV, cover letters and application forms' to second year students taking the Research Science module.

We put an emphasis on motivating and encouraging students in their penultimate year of study to take the first steps in the direction of their future careers after graduation.
